

# Apple Disk Copy 4.2

## Quick Reference Guide

### Introduction

Apple Disk Copy is a utility program that transfers image files onto 3.5" floppy disks (800K or High Density\*)

\* High Density (also called FDHD) disks hold 1.4 MB.

If you're reading High Density images, increase the memory allocation for Apple Disk Copy to 1600K. To do this:

1. Select the Apple Disk Copy 4.2 icon.
2. Choose Get Info from the File menu (or press Command-I).
3. Type 1600 in the Current Size box.
4. Close the Get Info window.
5. Launch Apple Disk Copy 4.2 and proceed with step 5 under the section titled **Installation and Use**.

### Installation and Use

Please follow these instructions step by step for proper installation and use.

1. Copy the Disk Copy 4.2 folder to your hard drive.
2. Open the Disk Copy 4.2 folder.
3. Double-click the Disk Copy application icon.

4. The title screen appears, as shown above. Click the mouse to continue.

5. The main screen appears, as shown above. Click the Load Image File... button. (You also can select Load Disk Image from the File menu or press Command-L.)
6. A file selection dialog box appears, as shown at the top of the next column. Choose the image file you want to copy to a floppy disk.

7. Click the Open button. A message appears: "Reading the master disk image into memory..." After the image is loaded into memory, the Make A Copy button is highlighted.

8. Click the Make A Copy button. You'll get this message: "Please insert a disk to COPY ONTO..."
9. Insert a floppy disk into the main floppy drive (the disk does not have to be formatted first). This message appears: "Now copying and verifying a disk..."

If you hear a loud beep during the copying process, it's because the disk you inserted already has data on it. A dialog box appears, similar to the one shown below:

- 10a. Click the Duplicate button if it's OK to over-write that

disk (or press Return).

- 10b. If you DO NOT want to over-write this disk, click the Eject button. The main screen appears again.
- 10c. Click the Make A Copy button again and insert a different disk.

When the image file has been transferred to the floppy disk, the disk will automatically eject.

11. For each image file you want to put on floppy disk, repeat steps 5 through 10.
12. When you are finished, click the Quit button. (You also can select Quit from the File menu or press Command-Q.)

### Hints and Help

Double-click the image file icon to launch Apple Disk Copy 4.2 and load the image file into memory at the same time.

---

### Where to get more information

Read the Disk Image Directions document in the Apple Disk Copy 4.2 folder.
